PROFESSIONAL SUMMARY

Backend Developer focused on designing scalable RESTful APIs and relational data models with Node.js, NestJS, Express, and ASP.NET Core. Experienced building modular, multi-role backend systems — spanning 25+ modules on some platforms — with PostgreSQL, MongoDB, Prisma, and Entity Framework Core, plus asynchronous processing with Redis and BullMQ. Implemented JWT-based authentication, role-based access control, and third-party integrations (Firebase Admin, WhatsApp Business API, AWS S3) in real production environments. Comfortable owning architecture decisions and deployments, carrying a Clean Architecture mindset across academic and professional projects alike.
